Review of the Mining at Merlin Diamond Mine
Disclaimer - Forward Looking Statement

This presentation contains “forward looking statements”. Such “forward looking statements” may include without limitation (1) estimates of future earnings, the sensitivity of such earnings to diamond values and foreign exchange rate movements (2) estimates of future diamond production (3) estimates of future cash costs (4) estimates of future cash flow, the sensitivity of such flows to diamond values and foreign exchange rate movements (5) statements regarding, future debt payments (6) estimates of future capital expenditure (7) estimates of reserves, resources and statements regarding future exploration results.

Where the Company expresses or implies an expectation or belief as to future events or results such expectation or belief is expressed in good faith and believed to have a reasonable basis. However, “forward looking statements” are subject to risks, uncertainties and other factors, which could cause actual results to differ materially from future results expressed, projected or implied by such “forward looking statements”. Such risks include but are not limited to diamond values, currency fluctuations, increased production costs and variances in grades or recovery rates from those assumed in mining plans, as well as political and operational risks in the countries and states in which the Company operates or sells product and governmental regulation and judicial outcomes.

The Company does not undertake any obligation to release publicly any revisions to any “forward looking statement” to reflect events or circumstances after the date of this presentation or to reflect the occurrence of unanticipated events, expect as may be required under applicable securities laws.

Foundation Resources – Our Consultants

Neil Kaner
Executive Consultant

A tertiary qualified executive with a wealth of international experience and expertise, predominantly in diamonds and base metals, with a strong combination of operational, technical and corporate management ability to board level.

Richard Price
Principal Consultant

A geologist with over 26 years of experience in the diamond mining industry with extensive experience in diamond exploration, diamond evaluation projects and diamond mine production in Australia and South Africa.

Alex Kidman
Principal Consultant

A geologist with over 10 years of experience in the diamond mining industry. Alex has extensive experience in resource evaluation production geology, geometallurgy and project management in Angola, DRC, Indonesia and Australia.

Foundation Resources has access to a team of experienced mining consultants.
Home to World-Class Diamonds

The largest diamond ever found in Australia came from the Merlin Diamond Mine measuring 104.73 cts

- Ashton Mining Ltd and Rio Tinto Ltd completed 5 years of trial mining at the Merlin Diamond Mine between 1999-2003 processing over 2.2 million tonnes to produce 507,000 cts
- Merlin diamonds is renowned for large, super white gem quality stones with over 31% of the stones previously produced being in the +13 DTC size fraction (approximately +0.7cts)
- Of the +1ct diamonds, in excess of 75% were assessed as ‘gem’ or ‘near gem’ quality
- Merlin has identified 80 exploration ready near mine targets for continued and sustained mining operations
Merlin Diamonds has secured substantial tenement holdings in the North Kimberley and Arnhem Land totaling approximately 22,000 km².
Merlin Diamond Field Overview
Merlin rough diamond production – super white colour
Merlin cut and polished diamond production – whites and fancy yellow
Village facilities
Mobile crushing and screening
Process - Recovery
Stockpiles

Trommel Oversize +40 mm – note weathering of kimberlite chert and sandstone content

Pit Designs

Full pit designs were only done on Kaye and Ector, using the revenue factor 1 shells as a guideline. The following design parameters were used:

- Haul road width: 12m
- Haul road gradient: 10%
- Bench height: 10m
- Berm width: 5m
- Batter angle: 75 degrees

The designs are shown below with the final pits in brown and the starter pits in purple and green. The starter pits are based on completing the existing Kaye and Ector pits.
Pit Designs

Kaye – Side view

Ector - Plan view
Rio Tinto’s 1997 feasibility study on the Merlin Diamond Project made the following comments:

“Small pipes, such as Ywain, may be fairly common in the field...”

“There is some potential for significantly larger pipes....”

“...evidence indicates that the Merlin field is part of a broader kimberlite province.”

“These factors (cretaceous cover, poor preservation of indicator minerals) while inhibiting the exploration effort, generally increase the possibility of other kimberlite fields and larger pipes to be present in the province.”
